

Why have people stopped drinking Corona beer?!?!?

Ok, so this is our writing on the new pandemic. We will create an article here.
All the leaves are brown, and the sky is grey.

The number of people infected with the [novel coronavirus](#) has surpassed 115,000, with the death toll reaching more than 4,200, as countries around the world continue to grapple with the challenges of containing the pandemic.

On Wednesday, China reported a slight increase in new daily cases, overturning several consecutive days of fewer new infections. The rise, from 19 on Monday to 24 on Tuesday, has been attributed to individuals returning from overseas, underscoring the difficulties faced by governments as the virus continues to spread rapidly across multiple continents.

Neighboring Japan and South Korea also saw an uptick in numbers Tuesday, with Japan reporting 54 more cases -- one of the biggest single-day jumps since the outbreak began, according to the country's Ministry of Health.
